10TH FLOOR. PLATFORM

DATA *and* GRAVY

Tune the query, not the plan

Data Management and
Analytics

Execution plans

- Generated by Query Optimizer
 - Cardinality Estimator
 - Statistics
 - YOUR design
- How SQL will execute the query
 - Table access
 - What order
 - Join algorithm
- VERY useful in performance tuning

Example graphical execution plan

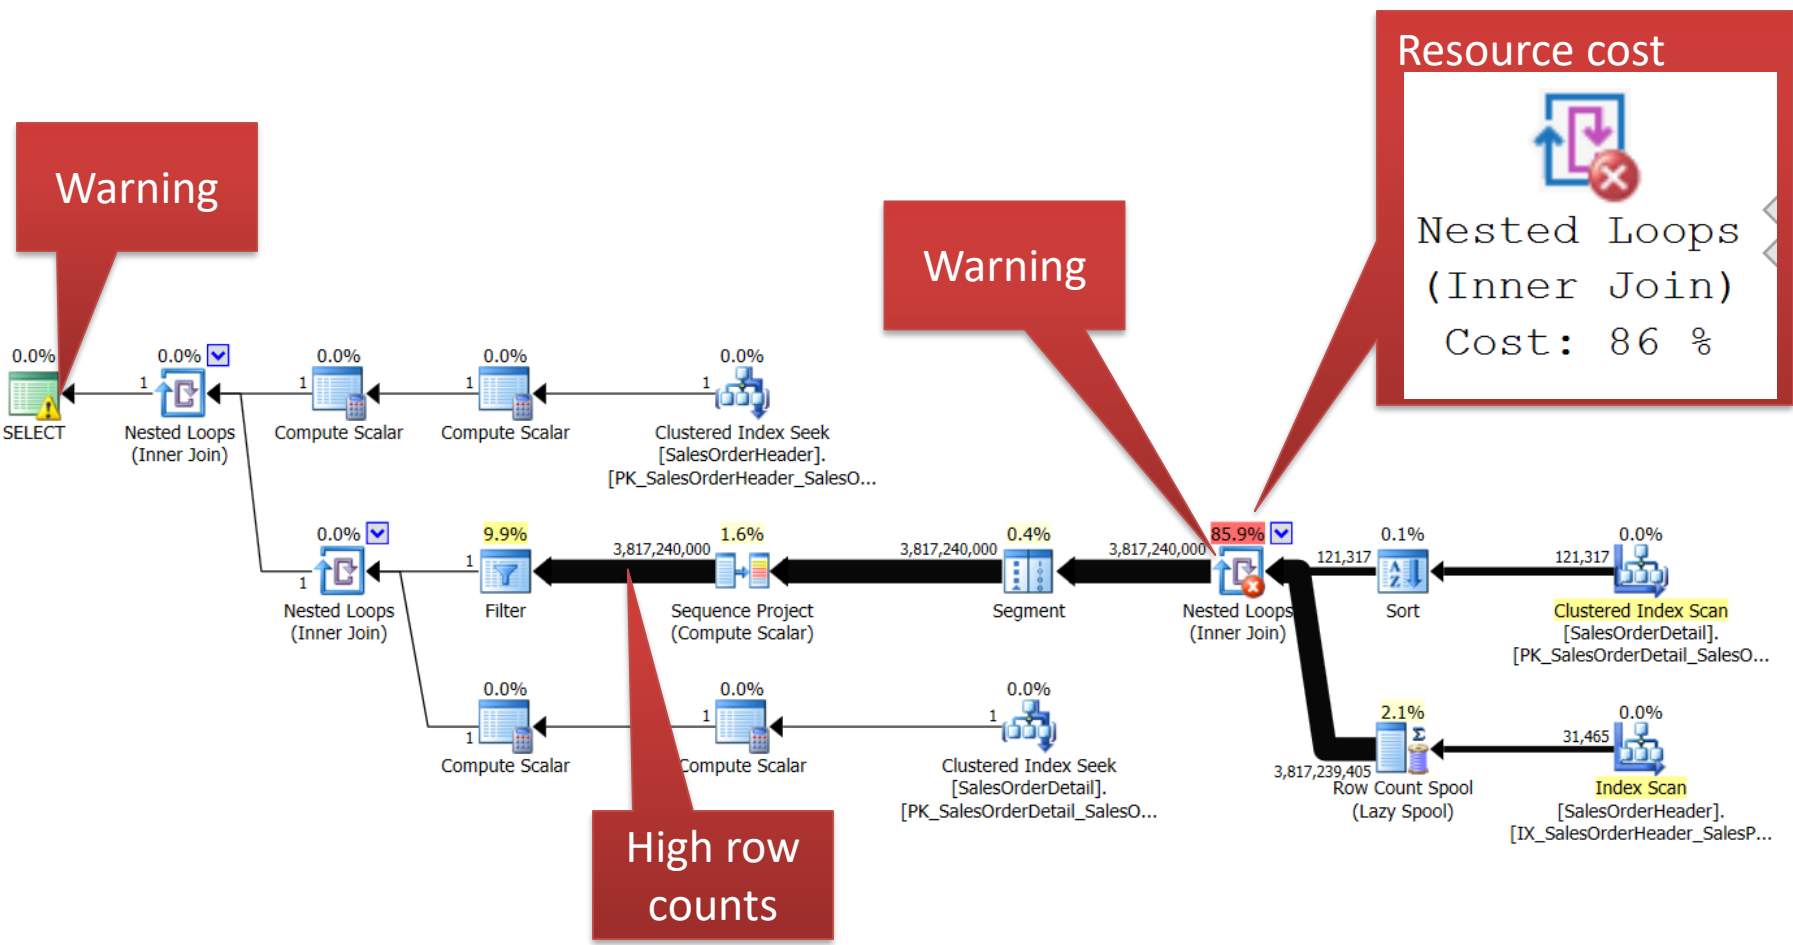

~_(\ツ)_/\

So what's the
problem?

Your time is precious

- DBA firefighting
- Looking for quick wins
- Focus on 'bad' operators
 - Table Scans
 - Scan operations in general (prefer seek)

Performance tuning?

- Not just the plan
- Time
- CPU
- Reads/Writes

DEMO

Index structure

Person.Person

PK_Person_BusinessEntityID

=====

3820

Performance tuning

- set statistics io
- set statistics time
- execution plans
 - understand why you are getting certain operators
 - is there a better way?
- wait stats

Excellent Resources

- SentryOne Plan Explorer
FREE!
